Scale 1:1 · units mm · view from OUTSIDE (print side)
All creases fold away from viewer

Closed box (outside approx.):
215 W × 230.5 D × 199 H
Clear inside (between liners):
206 W × 226 D × 196 H (Rev C insert fits)
Sheet size: 726.8 × 989.5

LEGEND

- Cut (incl. 6 lock slots in bottom)
- Crease / fold
- Double crease 2 mm apart (180° folds)
- Corner ears (no glue)
- Liners (fold 180° inside)
- Bleed +3 mm for artwork

NOTES — NO GLUE ANYWHERE

1. Back and front lip fold up from BOTTOM. Front lip and lid front are full outside width: they cover the side edges.
2. Side-wall ears fold in; side walls go up, ears sit BEHIND the front lip. Inner lip folds 180° down over them, its 2 tabs push into the bottom slots.
3. Back ears fold in; side LINER folds 180° over the slope edge, covers them, 2 tabs push into the bottom slots.
4. Lid hinges on the back top edge (no top strip): the top is one panel, all its edges are folds.
5. Lid front down, lid sides down, lid liners 180° over the slope edge; their ears go in BEHIND the lid front.
6. Lid inner front folds 180° up and traps those ears; the tuck folds 180° down and goes in behind the inner lip.
7. Clear inside stays 206 x 226 x 196: Rev C insert fits.
8. Draft for white sample - printer to confirm crease and slot allowances for their board before die.
9. E-flute: run flutes parallel to the long side folds; 180° folds use a double crease.
