MFC CAP BOX + CAP INSERT - PRODUCTION SPEC

Box Rev I (glueless, E-flute) and insert Rev C (F-flute). All dimensions in mm.

1. Files

MFC-box-RevI_DIELINE_1to1.pdf / .dxf - Box die-line, 1:1 (production file)
MFC-box-RevI_DRAWING.pdf - Box drawing with dimensions and assembly notes
MFC-insert-RevC_DIELINE_1to1.pdf / .dxf - Insert die-line, 1:1 (production file)
MFC-insert-RevC_DRAWING.pdf - Insert drawing with dimensions
PDF die-lines: spot colour CutContour (magenta) = cut, spot colour Crease (cyan) = crease.
PDF layers: CUT, CREASE, INFO (INFO is set to non-printing). DXF layers: CUT (red), CREASE (blue), units mm.

2. Box - Rev I

Style: one-piece glueless folding box, lid hinged on the back top edge, short tuck.
Board: E-flute litho-laminated, caliper ~1.5 mm. Flutes parallel to the long side folds.
Closed size, outside approx.: 218.2 W x 233.6 D x 199 H. Clear inside: 206 W x 226 D x 196 H.
Flat sheet (die-line): 731.6 x 947.6 mm.
Side split: base side wall stays full height (196) for 60 mm from the back wall (step),
then slopes 44.6 deg to the front. Lid side ends 65.4 mm from the hinge.
180 deg folds (liners, inner lip, lid inner front, tuck) use a double crease 2 mm apart.
Locking: 6 slots in the bottom take the tabs of the side liners (4) and the inner lip (2). No glue anywhere.

3. Insert - Rev C

Board: F-flute (or SBS 28-30 pt). Flat sheet: 945.1 x 370.8 mm.
Main panel 202 x 217 at 65 deg, top flap 48 (to back wall), tray flap 83.6 (on box floor).
Wings fold back into two support tubes (tube back wall 100); inner walls lock with tabs/notches.
Arch: petals fold forward to hold the cap crown. Fits box inside 206 x 226 x 196.

4. Printing

Artwork will be supplied separately on the same 1:1 template: CMYK, 3 mm bleed outside the cut line,
text min. 3 mm inside cut and crease lines, all fonts outlined. Print side = outside of the box.
Die-line layers must not print.

5. Before production

1. Please make a WHITE (unprinted) sample of the box and the insert together and send photos.
2. Please confirm crease and slot allowances for your board and adjust the die if needed.
3. Check: insert sits flat, lid closes without force, tuck goes in behind the inner lip.
4. Please send the final die-line back for approval before cutting the die.
