MFC - CAP BOX

Rev H - GLUELESS, short tuck, inside depth fixed to 226

Material: E-flute litho-laminated board, caliper ~1.5 mm
Scale 1:1 - units mm - view from OUTSIDE (print side)
All creases fold away from viewer

Closed box (outside approx.):
218.2 W x 233.6 D x 199 H
Clear inside (between liners):
206 W x 226 D x 196 H (Rev C insert fits)
Sheet size: 728.1 x 947.6
Layer clearance: 0.79 mm, side seam gap: 5.9 mm

LEGEND

- Cut (incl. 6 lock slots in bottom)
- Crease / fold
- Double crease 2 mm apart (180 folds)
- Corner ears (no glue)
- Liners (fold 180 inside)
- Bleed +3 mm for artwork

NOTES - NO GLUE ANYWHERE

1. Back and front lip fold up from BOTTOM. Front lip and lid front are full outside width: they cover the side edges.
2. Side-wall ears fold in; side walls go up, ears sit BEHIND the front lip. Inner lip folds 180 down over them, its 2 tabs push into the bottom slots.
3. Back ears fold in; side LINER folds 180 over the slope edge, covers them, 2 tabs push into the bottom slots.
4. Lid hinges on the back top edge: the top is one panel.
5. Lid front down, lid sides down, lid liners 180 over the slope edge; their ears go in BEHIND the lid front.
6. Lid inner front folds 180 up and traps those ears; the tuck folds 180 down and goes in behind the inner lip.
7. Rev F/G add clearance for real board thickness: gaps between stacked layers, a wider side seam and room for the 180 fold edges at the back hinge and the front seam.
8. Draft for white sample - printer to confirm crease and slot allowances for their board before die.
9. E-flute: run flutes parallel to the long side folds; 180 folds use a double crease.

Rev H - glueless - 2026-11-08
